Name: Ashley

Title: Flamingos

Intro

How do they eat?

Hatchlings

✓ Why do Flamingos stand on one leg? Why are Flamingos pink? Find out how these pink birds use their special traits to survive.

✓ flamingos are filter feeders which means they fill their beak with water and food. Then they use their strong tongue to push the salt water down and swallow the

food. Did you know that pink flamingos turn pink because they eat shrimp

✓ Did you know that Hatchlings drink pink milk? Their beak is also 5 in tall which is tiny for a flamingo. And did you also know that Hatchlings look nothing like its parents.

Title: Think pink

Courtship

Flocks

Standing on one leg

Courtship is a behavior that helps
a ^{Flamingos} flamingo find a mate. They
do ten different dances

Did you know that some
Flamingo Flocks have more
than million but most
have one thousand.

an interesting adaptation
is Flamingos stand on
one leg because it
keeps them warm
and because their flexible
and strong.

For EX:

- wing salute
- Twist preen
- Marching
- And Head flagging
- And inverted wing salute

Flamingo flocks also help
the adult flamingo watch
it chicks by their
predators like vultures, storks,
and lions, tigers also snakes

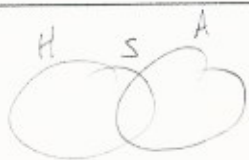

Name: _____

Adults / Hatchlings

Habitat

Conclusion

Venn diagram

Take a look at the similarities and differences between Adult Flamingos and their Hatchlings.

Flamingos live far like in swamps, lakes and lagoons because their rowdy.

Now you know how Flamingos use their special traits to survive. I hope you enjoyed learning about Flamingos as much as I did.

What I know! question?

only Pink birds
stand on one leg
live in lakes or
where its low tide
and where there
are lots of fish.
and that the also
fly

Why do they stand
on one leg?

Why are the

Pink?

Why do they have
long legs and long
necks?

What

I learned!
Flashy Flamingos.

most flamingo flocks have more than one million
flamingos in one flock!

• Flamingos are also rowdy

• Flamingos ~~wheather~~ also live in swamps, lakes, and lagoons with tropica

• Female flamingos lay one egg at a time

• The Baby Flamingos chirps inside the egg and ~~most~~ ^{the} parents honk back.

• It takes 24-36 hours to hatch

• I never knew that Flamingos feed their babies
Pink Milk

• Adult Flamingos and chicks look nothing a like

• Flamingo babies are about 5 inches tall and 3.2 ounce
predators are bigger birds such as vultures, storks, Ar
lions, tigers, also snakes.

• The Flamingo flock also protect/helps the other Ad.
watch these chicks.

• I thought it was interesting that the Zoo takes care
of the baby flamingos like the adult flamingos
• baby flamingos fly at 3 months

• Also at the age 3 baby flamingos don't need their
parents no more because their beaks are fully develop

• Flamingos Food is tiny organisms, which are tiny living
Plants and Animals.

• Filter feeding helps Flamingos by getting
more Food

~~straw~~ ~~the~~ ~~reason~~ ~~why~~ ~~they~~ ~~have~~ ~~long~~ ~~necks~~

lay each year on
What?

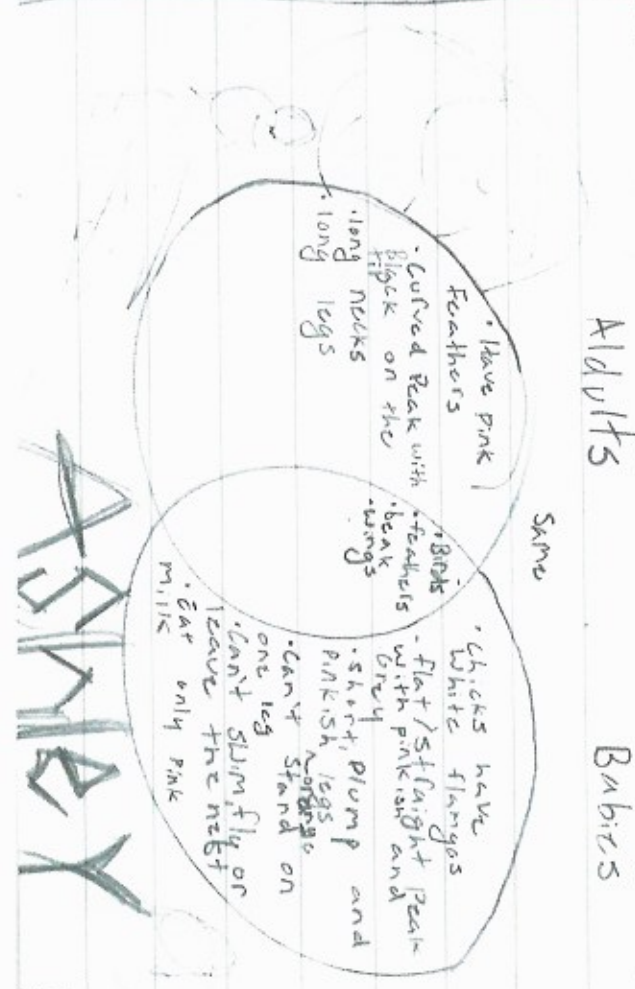

• shrimp change contains the pigments that the color of the b

• standing on one leg is adaptation keep them warm and comfortable

• Flamingos are flexible and strong standing on one

• When flamingos are preening they spread oil on their feathers to make them waterproof.

• parent flamingos build the nest in mud and then they take turns taking on the c
